

From the table, it is noticeable that staff_id does not really need primary key(stud_id and subj_code) to be uniquely defined, because it could be defined by subj_code alone. So we could make another table with subj_code and staff_id. The result is like this:

Stud_id	Stud_name
1234	John Smith
9555	Peter Nguyen

Stud_id	Subj_code	Sem_year	Staff_id	grade
1234	ITM2005	1/2015	111	83D
1234	ACS1005	2/2015	222	44N
9555	ITM2005	1/2015	111	95HD
9555	PRG1001	2/2015	333	65C

Subj_code	Staff_id
ITM2005	111
ACS1005	222
PRG1001	333

Subj_code	Subj_title
ITM2005	System Architecture
ACS1005	Data Mgmt
PRG1001	Programming I

Staff_id	Convenor
111	Bob Hauser
222	Jane Collins
333	Ahmad Singh
