Find the number of Customers through their state in the table:

```
MariaDB [SalesOrdersExample]> SELECT COUNT(*) AS Customers, CustState
    -> FROM Customers
    -> GROUP BY CustState;
+-----------+-----------+
| Customers | CustState |
+-----------+-----------+
|         7 | CA        |
|         4 | OR        |
|         6 | TX        |
|        11 | WA        |
+-----------+-----------+
4 rows in set (0.006 sec)
```
