Name: Cuong Nguyen

Student ID:102840305

After using the regular expression "\b(([0-9]|[1-9][0-9]|1[0-9][0-9]|2[0-4][0-9]|25[0-5])\\.){3}([0-9]|[1-9][0-9]|1[0-9][0-9]|2[0-4][0-9]|25[0-5])\b" (with help from Pum Suan Khai), I am able to count 12 and 967 addresses from IPaddresses.txt and access.log, respectively by combining with egrep –c command.
